

## A simple and safe way to remove fats, oils and grease and avoid blockages

FOGZAP is a powder-based, environmentally friendly bacterial treatment that completely digests fats, oils, grease and saponification (FOGS) in kitchen waste systems, preventing re-congealing downstream.

This two-phased treatment is a simple, cost-effective, and safe way to remove FOGS from grease traps and grease recovery units.

### Before FOGZAP

### 12 weeks after FOGZAP

## The benefits

More cost-effective than existing methods

Safe and easy to administer

Removes the need for harsh chemicals

Maintains infrastructure integrity

Reduces odours

Reduces frequency of call-outs and tank replacement

Reduces carbon emissions
